The expansion card types EXP2, EXP3, EXP4 and EXP5  
are intended to manage non-safety relevant input and output  
signals. The only exception is for the APS input, physically  
placed on the EXP2, EXP4 and EXP5 card but directly  
managed by the automatic burner control ESTRO.  
Following an ignition failed, maximum 2 full start cycles  
including pre-purge can be set-up.  
The High temperature function is not applicable for  
EN298:2012 & AS4625 for domestic application, but is  
designed to comply with EN746-2 or IEC13577-2 for  
industrial application or with IEC 62282-3-100 for fuel cell  
power systems. Refer to relevant application / appliance  
standard / regulations to activate this function.

The Flame Failure Response Time (FFRT) of models

(Type 1A and 1B) shall be limited to be within 1 second;

FFRT of other models (Type 1Ca and 1Cb) shall be limited to be within 2 seconds.

## Notes:

- Inter-waiting time between ignition trials is less than 5 minutes for atmospheric burner controls. Suitability for use of these controls is subject to its intended application and relevant product standards;

- Type 1B or 1Cb with rigorous main frame establishment period (5 seconds or less);

- Type 1Cb with single reignition only.

A mains voltage signal at theinput results in a flame signal. The entire system is then only suitable for continuous operation if the external flame safeguard relay being used has been approved and certified in Australia for continuous operation. If necessary, a second switching contact (redundancy contact) can also be used for the Australian approved and certified external flame safeguard relay.
