ignition

as the basic model with the following exceptions:

- safety shut-off valve deleted
- pilot valve assembly is employed
- first coil assembly functions as dual automatic valves
- diode pack no. 394821-5 or 394821-25 is employed
- first automatic valve controls the pilot gas flow

'5' = for use with a direct spark ignition system, the design is the same as the basic model with the above exceptions.

2<sup>nd</sup>: 'A' = standard adjustable gas pressure regulator

'C' = step-opening gas pressure regulator

'H' = same as 'A' except the automatic valve assembly no. 393086 is employed for slow-opening characteristics.

'J' = same as 'H' except time delay diode pack no. 20217A is employed.

'K' = same as 'H' except the minimum operating temperature is  $-40^{\circ}\text{C}$  instead of  $-17^{\circ}\text{C}$ .

'M' = same as 'A' except the minimum operating temperature is -40°C instead of -17°C.

'N' = same as 'K' except 2-stage regulator employed.

'P' = same as 'C' except the power unit no. 394331-2 is employed and the minimum operating temper is -40°C.

 Other Notes:  
 Flame Failure Response Time must not exceed 1s for  
 Type A/B and must not exceed 2s in Type Ca / Cb.  
 The expansion card types EXP2, EXP3, EXP4 and EXP5  
 are intended to manage non-safety relevant input and output  
 signals. The only exception is for the APS input, physically  
 placed on the EXP2, EXP4 and EXP5 card but directly  
 managed by the automatic burner control ESTRO.  
 Following an ignition failed, maximum 2 full start cycles  
 including pre-purge can be set-up.  
 The High temperature function is not applicable for  
 EN298:2012 & AS4625 for domestic application, but is  
 designed to comply with EN746-2 or IEC13577-2 for  
 industrial application or with IEC 62282-3-100 for fuel cell  
 power systems. Refer to relevant application / appliance  
 standard / regulations to activate this function.

|             |            | Models LMV50.... and LMV52.... only - Flame supervision can be performed by means of an external, Australian approved certified (failsafe / self-checking) flame safeguard relay. A mains voltage signal at the input results in a flame signal. The entire system is then only suitable for continuous operation if the external flame safeguard relay being used has been approved and certified in Australia for continuous operation. If necessary, a second switching contact (redundancy contact) can also be used for the Australian approved and certified external flame safeguard relay.
