Notes:  
1 - All Classifications require 'Pilot Prove Time'  
– option/parameter #115 be set to 5 seconds  
2 - 1st Safety time is password protected  
programmable – option/parameter #114  
3 - 1st Safety Time of 10 seconds cannot be used for  
an interrupted start flame, only an intermittent start  
flame  
4 – All controllers conform with classification  
1A/1B/2A/2B depending on flame monitoring  
equipment and '1st Safety Time'  
- Class 1 requires the use of a self-check UV  
scanner or IR scanner (mode dependent)  
- Class A requires the '1st Safety Time' to be set to  
3/5 seconds - option/parameter #114 set to 3/5  
seconds  
5 - If external flame switch is installed classification  
will depend upon the classification of the external  
flame switch.
