Superscript Notes:

1. Inter-waiting time between ignition trials Is less than 5 minutes for atmospheric burner controls. Suitability for use of these controls is subject to its intended application and relevant product standards.

2. Type B or Cb with rigorous main flame establishment period (5 seconds or less)

3. Type Cb with single reignition only.

| Burner control unit for mounting in 19" module sub-racks, for controlling, igniting and monitoring impulse controlled, modulating or staged-controlled gas burners, for continuous operation with ionisation or UV control UVD1 sensor, for intermittent operation with UVS type sensor. Display the program status, unit parameters and flame signal: manual mode for burner adjustment and for diagnostic purposes; visualisation and adaption to the specific application via the PC programming and diagnostic software BCSOFT. Optionally available with air valve control and PROFIBUS DP connection via fieldbus interface module PFA.(refer Note 3) |                   |

(In conjunction with UV sensor UVS for permanent operation)  
List of all available models:BCU 440 - For directly ignited burners up to 360KW without air valve control  
BCU 460 - For directly ignited burners of unlimited rating with or without air valve control  
BCU 460\_U - For directly ignited burners of unlimited rating with or without air valve  
Flame monitoring prepared for UVD 1  
BCU 460\_B1 - For directly ignited burners of unlimited rating with or without air valve control. With Profibus interface.  
BCU 460\_U\_B1 - For directly ignited burners of unlimited rating with or without air valve control. Flame monitoring prepared for UVD 1 and with Profibus interface.  
BCU 465 - For directly ignited burners of unlimited rating with extended air control  
BCU 465\_B1 - For directly ignited burners of unlimited rating with extended air control. With Profibus interface.  
BCU 480 - Version for pilot and main burners with air valve control  
BCU 480\_U - Version for pilot and main burners with air valve control. Flame monitoring prepared for UVD 1.  
BCU 480\_B1 - Version for pilot and main burners with air valve control. With Profibus interface.  
BCU 400: Noxmat - Customer specific version with extended air control.  
BCU 400: CBFF - Customer specific version with extended air control.  
BCU 400: CBFF...B1 - Customer specific version with extended air control and Profibus  
Note: The suffix of the type numbers are not safety relevant unless the time exceeds the specifications below:  
BCU - Burner control unit  
4 - Series 400  
40 - Basic version  
60 - Standard version  
65 - Extended air control  
80 - Version to pilot and main burners  
-3 - 1st safety time on start-up: 3 s  
-5 - 1st safety time on start-up: 5 s  
-10 - 1st safety time on start-up: 10 s  
/3 - 2nd safety time on start-up: 3 s  
/5 - 2nd safety time on start-up: 5 s  
/1 - Safety time operation: 1 s  
/2 - Safety time operation: 2 s  
L - Air valve control  
R - Mains voltage 115 V AC, 50/60 Hz, for grounded and ungrounded mains  
W - Mains voltage 230 V AC, 50/60 Hz, for grounded and ungrounded mains  
1 - Ignition transformer TZI 5-15/100  
2 - Ignition transformer TZI 7-25/20  
3 - Ignition transformer TZI 7,5-12/100  
8 - Ignition transformer TZI 7,5-20/33

| Siemens Ltd | Cont'd ... | <p>With Self-Checking QRI2... device, Self-checking QRA7... device or Flame Ionisation.</p> <p>Models LMV50.... and LMV52.... only - Flame supervision can be performed by means of an external, Australian approved certified (failsafe / self-checking) flame safeguard relay. A mains voltage signal at the input results in a flame signal. The entire system is then only suitable for continuous operation if the external flame safeguard relay being used has been approved and certified in Australia for continuous operation. If necessary, a second switching contact (redundancy contact) can also be used for the Australian approved and certified external flame safeguard relay. Intermittent Operation (Class 2A) with:</p> <p>UV Detector type QRA2, QRA4.U, QRA10.C with AGQ1.1A27, QRB... or flame Ionisation</p> <p>Suitable for use with the following auxiliary devices: Actuators SQM45..., SQM48... and SQM91....</p> <p>User Operator Panel (HMI) AZL5... and AZL5...WH</p> <p>Oxygen trim control with O2 controller type PLL52..., QGO20... or QGO21.... probe and AGO20... collector (LMV52 only)</p> <p>Optional control for one external fan motor variable speed drive (VSD) / frequency converter with fan speed sensor AGG5.31... ## PREFACE

The Australian Gas Association (AGA) manages and operates accredited Product Certification Schemes, with funding largely provided by Certificate Holders through certification fees and badge sales. The AGA is an active participant in the standards writing process with representation on many *Standards Australia* committees that develop and publish the standards that underpin the Schemes.

In addition to product certification services for the electrical and plumbing industries, the AGA certifies gas product for the following categories or any combination of these categories:

Natural Gas  
Liquefied Petroleum Gas

Approval for Liquefied Petroleum Gas appliances is divided into three sub-groups, designated as P (Propane), B (Butane) or U (Universal) gas.

### **Product Compliance:**

Product that has been certified by AGA to comply with the requirements of the relevant Code/Standard, is subject to the Rules Governing the Scheme and, if required under the Scheme, is subject to routine and regular audits to confirm continued compliance.

### **Directory Structure:**

AGA now certifies a variety of products, which are subject to one or more specific accredited type-tested schemes. This Directory lists current certificates grouped under the following headings:

- Type Tested Gas Products only
- Gas Cylinder Certification
- Disposable Gas Cartridges
- Test Stations Certification
- Type Tested Electrical Products only (ie prescribed and non-prescribed articles)
- Type Tested Plumbing Products (WaterMark)
