## PREFACE

The Australian Gas Association (AGA) manages and operates accredited Product Certification Schemes, with funding largely provided by Certificate Holders through certification fees and badge sales. The AGA is an active participant in the standards writing process with representation on many *Standards Australia* committees that develop and publish the standards that underpin the Schemes.

In addition to product certification services for the electrical and plumbing industries, the AGA certifies gas product for the following categories or any combination of these categories:

- Natural Gas
- Town Gas
- Tempered Liquefied Petroleum Gas
- Liquefied Petroleum Gas

Approval for Liquefied Petroleum Gas appliances is divided into three sub-groups, designated as P (Propane), B (Butane) or U (Universal) gas.

### **Product Compliance:**

Product that has been certified by AGA to comply with the requirements of the relevant Code/Standard, is subject to the Rules Governing the Scheme and, if required under the Scheme, is subject to routine and regular audits to confirm continued compliance.

### **Directory Structure:**

AGA now certifies a variety of products, which are subject to one or more specific accredited type-tested schemes. This Directory lists current certificates grouped under the following headings:

- Type Tested Gas Products only
- Gas Cylinder Certification
- Disposable Gas Cartridges
- Test Stations Certification
- Type Tested Gas & Electrical Products (ie where the AGA Certificate covers an appliance assessed to both gas and electrical standards, eg a cooker with an electric oven and gas hotplates)
- Type Tested Electrical Products only (ie prescribed and non-prescribed articles)
- Type Tested Plumbing Products (WaterMark)
